SUMMARY

AI Engineer and full-stack developer who gets called in for the work that has not been scoped yet: the R&D question nobody has answered, the performance problem nobody can locate, the product that needs building from scratch. Shipping products since 2019, in AI and machine learning roles since 2023: LLM and RAG systems, agentic automation, computer vision and multilingual speech-to-text, plus the backends, APIs and MLOps pipelines they run on. Python-first across AWS, Azure and GCP.

- **Took a 14-second page load down to under 1 second** by finding three redundant database round trips hidden in a microservice chain, on an encrypted table of 40,000+ patient records.
- **6x faster claims processing** after replacing a manual revenue cycle workflow with agentic automation.
- **Sub-second multilingual speech-to-text** across several Indian regional languages, running in production.

SKILLS

Machine Learning and AI: Python, PyTorch, TensorFlow, YOLO, deep learning, natural language processing (NLP), computer vision, face detection, OCR, ICR, speech-to-text (STT) and text-to-speech (TTS), Qiskit

Generative AI: large language models, retrieval-augmented generation (RAG), LangChain, LlamaIndex, agentic AI, prompt engineering, vector databases (Pinecone, Turbopuffer), SGLang, model fine-tuning, model compression

MLOps and Infrastructure: MLflow, H2O MLOps, Kubernetes, Docker, CI/CD, Apache Airflow, Grafana, Prometheus, edge deployment, model monitoring, performance profiling, distributed systems debugging

Cloud and Data: AWS, Azure, Google Cloud Platform, Amazon SageMaker, Apache Kafka, MQTT, MongoDB, PostgreSQL, Firebase, SCADA

Software Engineering: FastAPI, Django, REST APIs, Node.js, React, Flutter, JavaScript, PHP, Go, Git, Three.js

PROFESSIONAL EXPERIENCE

AI Engineer

Yosemite MD Solution, Mohali (hybrid) | March 2026 to June 2026

- Built agentic automation for revenue cycle management (RCM) that processed claims data six times faster than the manual process it replaced and removed most of the hand-off work for the billing team.
- Shipped voice agents on a speech-to-text and text-to-speech pipeline to handle routine patient and payer calls, plus a SOAP note transcription service that cut the corrections doctors made before signing off.
- Traced a 14-second load on the patient records screen to three redundant round trips between microservices and an encrypted 40,000-record table. Consolidated them into a single query path and brought full load time to 600 milliseconds, staying under 1 second at peak.

Software Developer (Contract)

Independent Contractor, Remote | January 2026 to March 2026

- Stabilised a Node.js edtech platform, and built a web application for LessPay, a fintech startup, covering transaction processing and user management from scratch.

- Built an OCR pipeline for a tax planning platform that detected, extracted and classified line items from transaction PDFs, then fed the parsed data into regenerated reports with charts.

AI/ML Associate (MLOps Engineer)

Aaizel International Technologies, Remote | August 2025 to December 2025

- Trained and deployed a multilingual speech-to-text model covering several Indian regional languages, tuned to return results in under a second.
- Built a multi-module radiosonde data parser on MQTT and Kafka, and automated SCADA workflows using satellite data for predictive validation.
- Led a real-time face detection build with active and passive liveness checks for a surveillance product.
- Automated retraining with MLflow and Kubernetes, and served predictions through FastAPI REST APIs.

AI Engineer

Sofly Innovation Pvt Ltd, Chandigarh | August 2024 to July 2025

- Built computer vision applications on drone imagery in Python and TensorFlow, reworking preprocessing and feature extraction to run 30 percent faster, and compressed models for edge devices to cut inference latency.
- Developed RAG pipelines with LangChain and LlamaIndex for conversational AI features used by paying customers.
- Designed the natural language interface for a SaaS chatbot and raised answer accuracy by roughly 25 percent through better retrieval and prompting.

Co-founder and Technical Lead

Aerwolf Technology (drone technology startup) | January 2023 to July 2024

- Built the product end to end: flight control software integrated with GPS and IoT sensors, with automated field mapping for precision agriculture.
- Designed and proposed a hydrogen fuel cell drone platform to extend flight endurance beyond battery limits.

Founder and Product Developer

Hostsac (web hosting and development agency) | June 2019 to January 2023

- Ran a web hosting and development agency, shipping custom websites, Flutter Android apps and progressive web apps in PHP and Laravel, with CI/CD set up for releases and the servers managed end to end.
- Delivered customised CRM, CMS and SaaS solutions for early-stage startups, from first build through deployment and support. Exited the business in 2023.

EDUCATION

B.E. Computer Science and Engineering, Honours in AI and ML
Chandigarh University, Punjab | 2021 to 2025

Class XII, Science, CBSE | Green Fields School, New Delhi | 2021
